

VIVO creates an **integrated record** of the scholarly work of your organization

VIVO is member-supported, open source software and an ontology for representing scholarship. VIVO supports recording, editing, searching, browsing, and visualizing scholarly activity.

VIVO is used in more than 60 institutions in more than 20 countries world wide, representing hundreds of thousands of scholars and millions of scholarly works.

Why use VIVO?

Connect

VIVO creates a connected, integrated record of the scholarly work of your institution, ready for reporting, visualization, and analysis.

Share

VIVO supports browsing and a search function which returns faceted results for rapid retrieval of desired information.

Discover

VIVO is developing world standards for big data representation of scholarly work, providing a single shared vocabulary for data regarding scholarship.

The VIVO approach

Open Source

VIVO and all VIVO components are provided free of charge. Memberships support technical leadership, promotion, infrastructure, and program.

Open Community

VIVO's active vibrant community contributes to the development of code, ontologies, and new innovations. Events like the annual conference help newcomers meet others and learn best practices.

Open Data

VIVO data is structured and linked, making it easy to share and re-use for many purposes. Data can be loaded from multiple sources, like local faculty systems, and publication databases.
